HISTORIC HOLMAN STREET RECONSTRUCTION

The scope of work involved is a 7,000 foot pedestrian realm along Holman Street. The existing ROW varies from 60'-80' throughout the project limits. Within the 2008 Major Thoroughfare and Freeway Plan Holman Street is designated as a local street within the street hierarchy system, which is defined as "less than one mile long; carries little traffic; provides access to homes and local businesses; accommodates on-street parking and pedestrians."

Asakura Robinson Company was engaged to make recommendations to improve and enhance the following features:

- sidewalks
- crosswalks
- street trees
- pedestrian lighting
- curb extensions
- bioswales
- shared bike lane and Columbia Tap trail
- historical markers
- thematic lighting

A series of meetings with local stakeholders and residents have resulted in an analysis of current conditions, concerns and needs which will be the basis of our recommendations.
