COMPREHENSIVE MOBILITY PLAN, CITY OF SUGAR LAND

Traffic Engineers, Inc. lead the development of the 2011 Comprehensive Mobility Plan for the City of Sugar Land to support the City's goal to expand the current broad vision for Superior Mobility into a more specific and actionable set of improvements and funding mechanisms that will allow the City to develop a transportation system that meets the needs of residents and businesses now and into the future.

The Plan includes recommendations for different transportation modes as well as land use planning impacts on mobility. Traffic Engineers, Inc. was the prime consultant leading a cross functional team of planners, engineers and architects to support the City in developing the Plan and the path forward for implementation. This included significant input on prioritization from stakeholders and City staff.

The plan incorporates a significant amount of public input including stakeholder interviews, public forums, an online survey, and a Mobility Summit for residents and community leaders to help shape a successful outcome. The completed plan was adopted by Sugar Land City Council in May 2011, and the city has actively begun implementing several of the short-term recommendations.
